

# THE NEW PRESSOTHERAPY MADE IN ITALY

## SUITABLE FOR:

- ◉ Edema
- ◉ Lymphedema
- ◉ Venous ulcers
- ◉ Venous insufficiency
- ◉ Muscle recovery

**I-TECH**  
MEDICAL DIVISION

# I-PRESS

I-Press is a **home pressotherapy** device that is ideal for the treatment of diseases affecting the circulatory system, in order to improve the peripheral blood circulation.

**Pressotherapy promotes proper venous circulation**, decreasing muscle tension caused by stress or chronic and acute pain. Thanks to its pumping action, pressotherapy favours venous return, increasing the blood supply to the tissues and their consequent correct physiological renewal. It can solve the problem of blood that could stagnate in damaged blood vessels, or in areas of the body that are not properly perfused.

External compression also allows excess interstitial fluids to return more easily to the circulatory system, helping to be properly and quickly eliminated.

## TECHNICAL FEATURES

**Power supply**  
230 VAC, 50 Hz

**Absorbed current**  
100 mA

**Therapy time**  
0÷30 min

**Max pressure**  
200 mmHg ( $\pm 20\%$ )

**Weight**  
2 Kg

## Equipment

I-Press can be supplied in 3 different versions

- ⊗ **I-Press LEG2** - 1 right legging, 1 left legging, tube connector with 8 terminations, 2 pressure plantars
- ⊗ **I-Press LEG1** - 1 legging (right or left), tube connector with 4 terminations, 1 pressure plantar
- ⊗ **I-Press ARM1** - 1 armband (right or left), tube connector with 4 terminations

All these different configurations are available in the **M** and **L** size (for example, I-Press **LEG1 M** or I-Press **LEG1 L**).

In addition, extensors to expand the width of the leggings are available as accessories.
